Netpresenter **Player**

PC Screensaver, Desktop Player, Emergency Alerts, Pop-ups

TV Player for Digital Signage and Emergency Alerts

Fully engage your employees and customers

Netpresenter Player allows you to more fully engage employees and customers by serving them compelling presentations on any screen, whether it's on office PC s or as digital signage.

Whether it's an emergency alert, message from the CEO, or a commercial video to your customers, Netpresenter Player gets your message across with easy, on any office PC or any digital signage screen.
Netpresenter Player can display your presentation on PCs as interactive screensaver, pop-up message, as desktop player, as emergency alert, and on digital signage and kiosk screens.

Serve presentations with videos, photos, PowerPoint, alerts, tickers, newsfeeds and web pages. Even YouTube videos and Adobe Flash are supported (both require Flash Player).

Broadcast personalized presentations to multiple groups on a pre-programmed schedule. And by using templates, you can quickly display your message in your own corporate identity.

Since 1995, Netpresenter Player is used by more than 1 million professionals at corporate communication departments, government agencies and Fortune 500 companies worldwide.

Key Features

• **Compact 350Kb software client for stable 24/7 multimedia playback**

• **PC Screensaver, Desktop Player, Pop-up alerts and Digital Signage TV Player in one**

• **Display videos, photos, alerts, tickers, YouTube, Flash, PowerPoint, newsfeeds and web pages**

• **Network friendly design runs on existing infrastructure, office PCs and Digital Signage screens**

• **Low bandwidth, extremely scalable, easy to rollout and administer**

Other Netpresenter software:

Netpresenter Editor or Message Server, for content creation and management.

Emergency Alert Server, for emergency alerts broadcasts and pop-ups.

The Newsfeed Server, to import news feeds (XML/RSS) from websites, web logs and stock tickers.

PowerPoint Publisher – publish straight from PowerPoint.
